

Cooperative memory changes what the carrier chooses to learn

A5-v2 finite two-region task • A4 sharing frozen • exact world and delivery enumeration

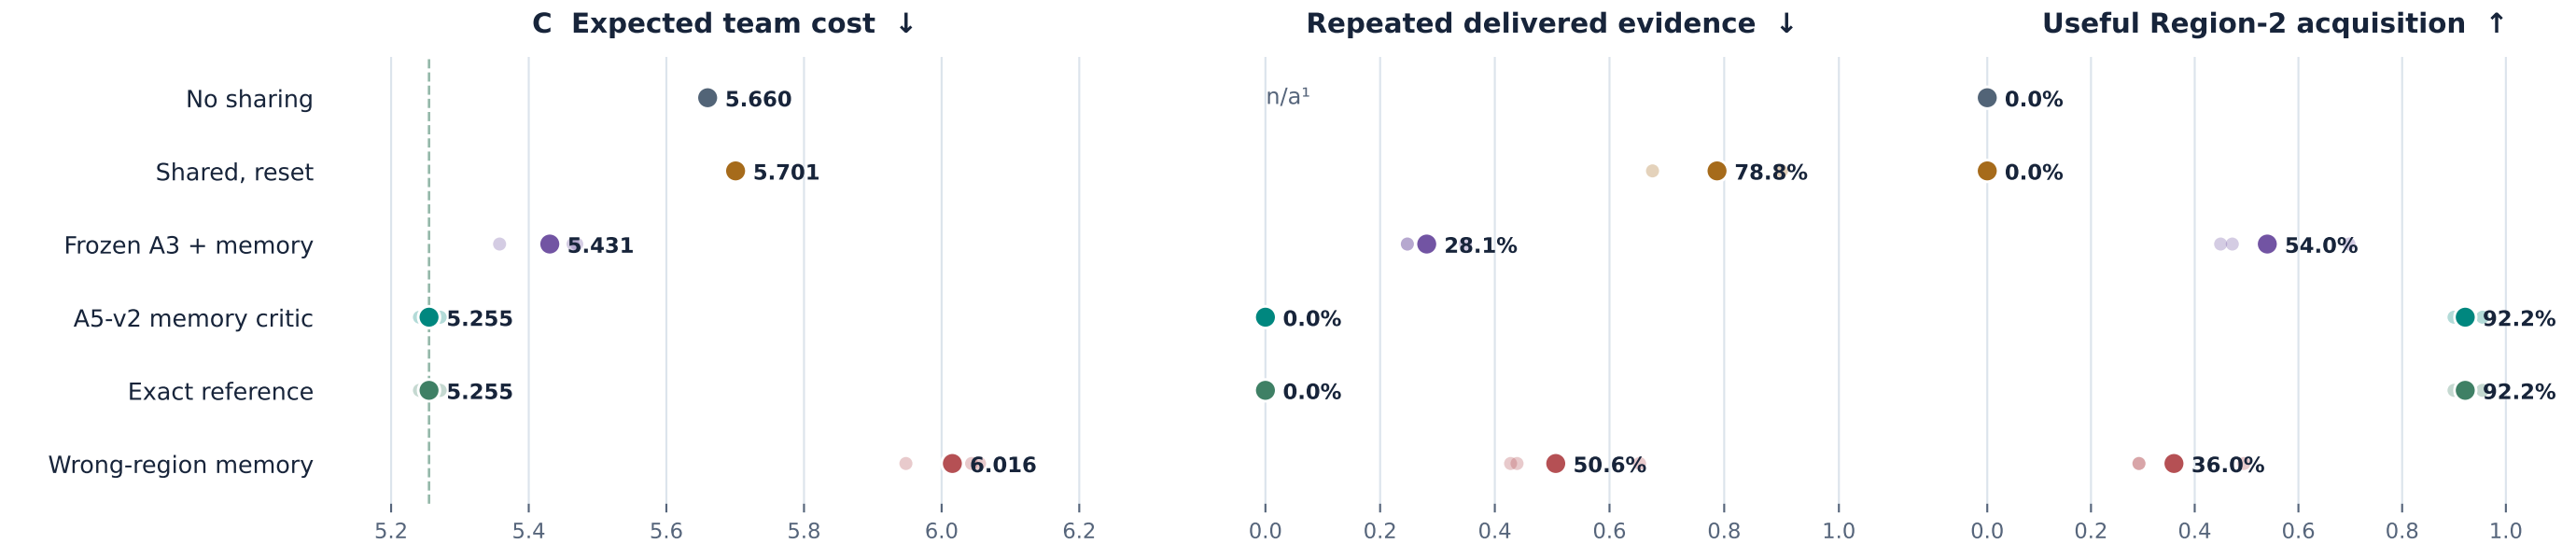

A What the carrier knows before deciding

B Same history, different acquisition

All-good world; both packets delivered (seed 1701). Branch cost: 4.2088 → 2.2088.

Dots: three paired checkpoints; large dot: mean. ¹No-sharing agents have no delivered evidence to duplicate. Exact reference optimizes the restricted carrier acquisition menu under frozen A4 and the fixed route executor.

Scope: noiseless finite information task; this figure does not evaluate two-region VMAS motion or port-Hamiltonian control.
