

CoPH-Sense: demonstrated mechanism, open learning gate

Status for Prof. Bajaj | 18 September 2026

What the latest diagnostic isolates

The same critic fits the two-state R1→R2 memory switch exactly, but does not fit the full 32-state training set. The held-out challenge also lacks the decisive mechanism cases.

Next gate

audit belief-conditional teacher targets → certify pair/memory states under frozen pH → one A3/A5 fit → paired evaluation

Scope: the R1→R2 replay is a restricted scripted-VMAS example; the NEED result is a controlled communication task. Neither is a held-out E2 result or proof of structural pH superiority.
